MOBILE VISION SCREENING

Test your kids' eyesight at home

Did you know 1 in 5 kids have eye risks that can cause blindness or learning disabilities? These risks are treatable if caught early but most pediatricians don't do this testing. GoCheck Kids Home uses a single photograph of the eyes, taken with the phone's camera at home to detect the most common eye problems in kids.

Conditions Are Treatable If Caught Early

Why use GoCheck Kids Home?

✅ Better eye screening

Other types of eye screenings used to detect eye problems may require a child to read a chart or give a verbal response. This can be difficult for children who are not yet reading or talking. Photoscreening with GoCheck Kids Home is done by taking a photo of the eyes and can be used effectively in very young children, even babies. Regular photoscreening with GoCheck Kids Home is important for your child's overall well-being and development.

✅ GoCheck Kids Home meets medical recommendations

Annual photoscreening with GoCheck Kids Home is recommended for children from 12 months of age by the:

- American Academy of Pediatrics (AAP)
- American Association for Pediatric Ophthalmology and Strabismus (AAPOS)
- American Academy of Ophthalmology (AAO)
- American Optometric Association (AOA)
- American Association of Certified Orthoptists (AACO)

✅ GoCheck Kids Home is easy and affordable

The app is free to download and can be used at your convenience in your home. Photoscreening is very affordable, and it is important to keep in mind that GoCheck Kids Home can help prevent permanent eyesight loss by helping detect the most common eye problem risk factors.
